Bashh guidelines chlamydia treatment

Treatment	Dose	TX Duration	Comment
metronidazole ^{A*}	400 mg BD	5-7 days	Advise patients of disulfuram reaction with alcohol, prior to taking metronidazole
OR clindamycin 2% cream	5g applicatorful per vaginum at night	7 nights	
OR clindamycin ovules	300mg per vaginum daily	3 days	
OR clindamycin	300mg orally twice daily	7 days	

TABLE 4. Recommended antibiotic treatment and post-treatment prophylaxis for partners, by age group

Age group	Antibiotic	Dose	Duration	Comments
<16 years	Amoxicillin	500 mg	3 days	For patients with penicillin allergy, use erythromycin 500 mg 4 times daily for 7 days
16-24 years	Doxycycline	100 mg	7 days	For patients with penicillin allergy, use erythromycin 500 mg 4 times daily for 7 days
25-59 years	Doxycycline	100 mg	7 days	For patients with penicillin allergy, use erythromycin 500 mg 4 times daily for 7 days
60 years and over	Doxycycline	100 mg	7 days	For patients with penicillin allergy, use erythromycin 500 mg 4 times daily for 7 days

Table 3. Empirical Antibiotic Therapy

Antibiotic	Dose	Duration	Comments
Amoxicillin	500 mg	3 days	
Doxycycline	100 mg	7 days	
Erythromycin	500 mg	7 days	

Who guidelines for chlamydia treatment. Who chlamydia guidelines.

In addition, SDA was also less effective than doxycycline for rectal CT in MSM and a meta-analysis of rectal samples in women showed significant rates of concurrent rectal infections in women with urogenital infection, with no association between reported anal intercourse and rectal infection. 2020 Jul 8; 20 (1):486. Doxycycline 100mg bd for 7 days is now recommended as a first-line treatment for uncomplicated urogenital, pharyngeal and rectal chlamydia infections, with Care Testing (CCT) for diagnosed rectal infections. Mycoplasma genitalium (MGen) is emerging as a significant sexually transmitted pathogen and co-infection rates of 3%-15% with chlamydia have been reported. Use of antibiotics during pregnancy and risk of miscarriage. Dis infected BMC. doi: 10.1186/s12-879-020-05 197-9. MartAn-SA. Publishing original research and practical papers, the journal contains in-depth review articles, short articles, case reports, audit reports, CPD documents and a lively correspondence column. Recent data show an increasing prevalence of macrolide resistance in MGen, probably due to the widespread use of SDA for the treatment of sexually transmitted diseases and the limited availability of diagnostic tests for MGen. Clinical presentation of asymptomatic and symptomatic heterosexual men who tested positive for urethral gonorrhoea at a sexual health clinic in Melbourne, Australia. PMID: 32 641 070 Free product PMC. *Muanda FT, Sheehy O, Berard A. 2020.
